Purification Process

- 💧 Sediment Filter- 5 Micron Sediment Filter. Stage 1 ensures removal of all Sediments , such as rust, sand and silt that may be found in most municipal water.
- 💧 Carbon Block- 1 Micron Granulated Activated Carbon Filter. A 1 Micron Granulated filter uses advanced technology to remove cancer causing elements such as pesticides, insecticides, benzene, defoliants, petro-chemical's, M.T.B.E's, P.C.B.'s.
- 💧 Post Carbon Block- A Final Stage Polish to ensure removal of 99% of lead & microbial cysts such as giardia & cryptosporidium. It safeguards that all chlorine has been removed and the water entering the tank is odorless.
- 💧 UV Light Technology (optional) - Ultraviolet disinfects water by damaging the DNA of harmful microorganisms, making them inactive and unable to reproduce. This is a powerful disinfectant assuring your water safe from contaminants.
- 💧 Ozone Injection (optional) - Ozone acts as an agent for breaking down pathogens. This method is used to quickly and easily disperse throughout the tank using high-purity diffuser stones. Ozone oxidizes viruses, bacteria and other organisms.

Drip Tray

- 💧 Positioned at the standard place of water dispense.
- 💧 Allows a sufficient amount of water to gather before draining out the bin.
- 💧 Soft alarm will inform to dispense the excess water.
- 💧 Lifts out in seconds for easy removal.
- 💧 Durable and dishwasher safe.

Folding Dispenser

- 💧 Convenience of a sports bottle filling station, flipped up.
- 💧 Secure placement for a cup or glass, flipped down.
- 💧 Recessed Dispensing - Assures to prevent contamination.

Leak Detection

- 💧 Auto electric shut-off valve
- 💧 Alarm calls attention to assess the system.
- 💧 Excess moisture sensor shuts off the system instantly.
