Cold Brew Coffee

One of the latest trends catching the world by storm and every convenient store in it's path.....Cold Coffee.

The preparation of Cold Brew Coffee requires several hours. The coffee is infused with cold water, which permeates the coffee particles releasing the most pleasant flavors of the coffee without over extraction. Time and water contact result in one of the most popular beverages in the market. The coffee can be served Black or with a variety of flavoring, sweeteners and milks.

Newco's COLD BREW system is designed to allow for the ease of preparation using soft Coffee Pods which retain the coffees and allow the penetration of water

through the Pod. This method of preparation offers a very easy system eliminating difficult cleaning requirements of the traditional system. The Coffee System includes a 3.5 Gallon visual and/or non-visual dispensers and drip tray for behind the counter or self-serve applications. This container is portable, can be easily transported to a refrigerated environment. The system includes a sieve pod container which is designed to fit into the dispenser to hold the coffee pods or packet of coffee and allow easy removal and refilling. All of the dispensers have a lid designed to maintain sanitation of the coffee in the dispensers.

<u>KIT PN</u>	<u>KIT DESCRIPTION</u>
104244	Kit, COLD BREW with Sieve and Dispenser
805150	Sieve, Single Chamber
